About the AIKTC – SOA ECOSYSTEM

Ecosystem is an attempt to bring back physicality to architecture education in a more structured environment to supplement the existing syllabus and learning modalities. Ecosystem aims to consolidate, within the same system, various verticals of architectural education sorted by elements of material/technology acting as independent wings that collaborate at a grand level to impart hands-on skills to students and participants from all walks of the industry.

It is also in the greater interest of Ecosystem, to set up within itself a repository of resource people, material, knowledge systems and research ideas that will be an asset to the larger design community and architectural fraternity. Ecosystem will set itself up as a single point of contact for professionals and students, to access and experience alternative systems of construction or experiment with material themselves.
